Leaf Shapes

The images below show the variety of leaf shapes that can be found on water (aquatic) plants.

Look at the aquatic plants found in and around the wetland and draw their shapes. Make a list of how many plants fit into the different **LEAF SHAPE** categories.

Note: Be careful not to damage the plant!

How many different types of leaf shapes did you find?

Diagrams from Sainty & Jacobs (1981). *Waterplants of New South Wales*
